# Shoal Creek Watershed Master Strategy

The Shoal Creek Watershed is the largest urban watershed in Central Austin comprising 13 square miles slicing North to South through the western edge of central Austin. The creek is approximately 11 miles in length and is highly stressed due to the urban activity and land development within the watershed.

This project is less about planning a physical future, but mapping the conditions and developing strategies that can better guide management actions from both a public and private perspective.

Vista is working with the Shoal Creek Conservancy on this ongoing project.

Part of the emerging strategy is the development of a “Shoal Creek Ownership Manual”

Shoal Creek History of Studies		In Sync with the Vision of the Shoal Creek Conservancy	Policy	Design/ Construction	Funding	Environmental	Cultural	Flood Hazard- and mitigation	Utilities	Bicentennial Project of the Horizons '76 Committee of the American Revolution Bicentennial Commission	Town Lake Corridor Study	Town Lake Park Comprehensive Plan	Shoal Creek Greenway Action Plan
